                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               임
E. coli Y1090 and phage DNA was purified from a liquid lysate. The cDNA inserts were gel purified after EcoRI digestion and ligated into pBluescript SK+. Aliquots of the ligation were used to transform E. coli DHSalpha which were plated onto medium with X-gal for selection of recombinants."

An aliquot of the amplified library was used to transduce E. coli Y1090 and phage DNA was purified from a liquid lysate. The cDNA inserts were gel purified after ECORI digestion and ligated into pBluescript SK+. Aliquots of the ligation were used to transform E. coli DHSalpha which recombinants."

This is the 5' sequence of the clone insert
Clone from 8. Wiemann, Molecular Genome Analysis, German Cancer
Clone from 8. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DRFZ); Email 8 wiemann@dkFz heidelberg.de;
sequenced by MediGenomix (Martinsried/Germany) within the cDNA
sequencing consortium of the German Genome Project. No 81 sequence
available.
This clone (DKFZD566E0346) is available at the RZPD in Berlin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1059
                                                                                                                       surface seawater using were isolated from 200 liters of surface seawater using a combination of differential. Illitration and density-dependent gradient centrifugation. Linker-amplified shotgun libraries were constructed by randomly shearing the total marine viral community DNA, end-repairing, ligating dsDNA linkers to the ends, and amplifying the fragments using Vent DNA polymerase. The resulting fragments were ligated into the pSWART vector and electroporated into MC12 cells (Lucigen; Middleton, W1)"

Linker-amplified shotgun libraries were constructed by randomly shearing the total marine viral community DNA, amplified sing the frequents using vent the ends, and amplifying the fragments using vent DNA polymerase. The resulting fragments were ligated into the pSWART vector and electroporated into MC12 cells (Lucigen; Middleton,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Breitbart, M., Salamon, P., Andresen, B., Mahaffy, J.M., Segall, A.M., Mead, D., Azam, F. and Rohwer, F. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16, 7
